Managed virtual network

Choose whether to set up a dedicated Azure Synapse-managed virtual network for your workspace. [Learn more](#)

Managed virtual network:

Enable

☒ Disable

To control public network access to your Synapse workspace, you must enable managed virtual network.

Firewall rules

Azure Synapse Studio and other client tools will only connect to the workspace endpoints if this setting is selected. Connections from specific IP addresses or all Azure services can be allowed or disallowed after the workspace is provisioned.

Allow connections from all IP addresses to your workspace's endpoints. You can restrict these permissions to just Azure datacenter IP addresses and/or specific IP address ranges after creating the workspace.

☒ Allow connections from all IP addresses

Encrypted connections

Azure Synapse Analytics applies TLS 1.2 encryption protocol for all network connections. [Learn more](#)

Integration Runtime (Self-hosted) node has been registered successfully.

Note: You can associate up to 4 physical nodes with a Self-hosted Integration Runtime. This enables high availability and scalability for the Self-hosted Integration Runtime.

We recommend you setup at least 2 nodes for higher availability. [See Integration Runtime \(Self-hosted\) article for details.](#)

Pregnancy_Diagnosis_DF	Succeeded	Data flow	12/21/2025, 2:46:40 PM	4m 34s	AutoResolveIntegrationRuntime (Central India)	

Step-by-step

1. Open your Pipeline
2. Connect Data Flow activities one after another
 - Use Success dependency
3. Ensure only ONE Data Flow runs at a time

Example:

```
nginx
```

Copy code

```
Provider_DF → Patient_DF → Location_DF → Encounter_DF → Encounter_Dx_DF
```

✓ This alone usually fixes the issue completely.

✓ FIX #2: Reduce Spark cores for EVERY Data Flow activity

For each Data Flow activity:

1. Click the activity
2. Go to Settings
3. Set:
 - Core count → 2
 - Compute type → General

⚠ You must do this for all Data Flows, not just one. ↓
